

10.3 Tangents to a Circle

January-10-14
12:54 PM

tangent: - a line that touches a circle at exactly 1 point
- the point where the line touches the circle is called the **point of tangency**.

- the tangent (line) is perpendicular to the radius (90°)

Ex. #1

Point 'O' is the centre of the circle
AB is a tangent to the circle
In $\triangle OAB$, $\angle AOB = 63^\circ$
What is $\angle OBA$?

RECALL: the middle letter is the angle

$$63^\circ + 90^\circ + \underline{27^\circ} = 180^\circ$$

$$\boxed{\angle OBA = 27^\circ}$$
