Binary Covalent Compounds

Wednesday, February 22, 2017

-2 non-metal elements joined by covalent bonds

- 2nd element ending changes to "ide"

- Use prefixes to give # of atoms

1 → mono $4 \rightarrow \text{tetra}$ $7 \rightarrow \text{hepta}$ 2 → di $5 \rightarrow \text{penta}$ $8 \rightarrow \text{octa}$ $3 \rightarrow \text{tri}$ $6 \rightarrow \text{hexa}$ $9 \rightarrow \text{nong}$ $10 \rightarrow \text{deca}$

Naming:

1X. SO2

ex. CO

__sulfur <u>dioxide</u> carbon <u>monoxide</u>

don't write mono'

ex. P2 S3

(x. N₂ 0₃

diphosphorus trisulfide dinitrogen trioxide

formulas:

ex. carbon disulfide

 $C + S_2 \rightarrow CS_2$

ex. <u>Carbon</u> tetrachloride

 $c + ci_{4} \rightarrow ccl_{4}$

ex. tetraphosphorus decaoxicle

P4 + 010 -> P4010

do not reduce!!
